Introduction

Dr Health is a doctor appointment system which can be used to make the life of the patients easier. The venture contains an administrator and client sides. The administrator side deals with all the administration like dealing with specialists' records, patient records and deal with the arrangement time, oversee treatment offices, etc. The administrator has a significant job in the administration of this online medical clinic the board framework.

Progress

Database

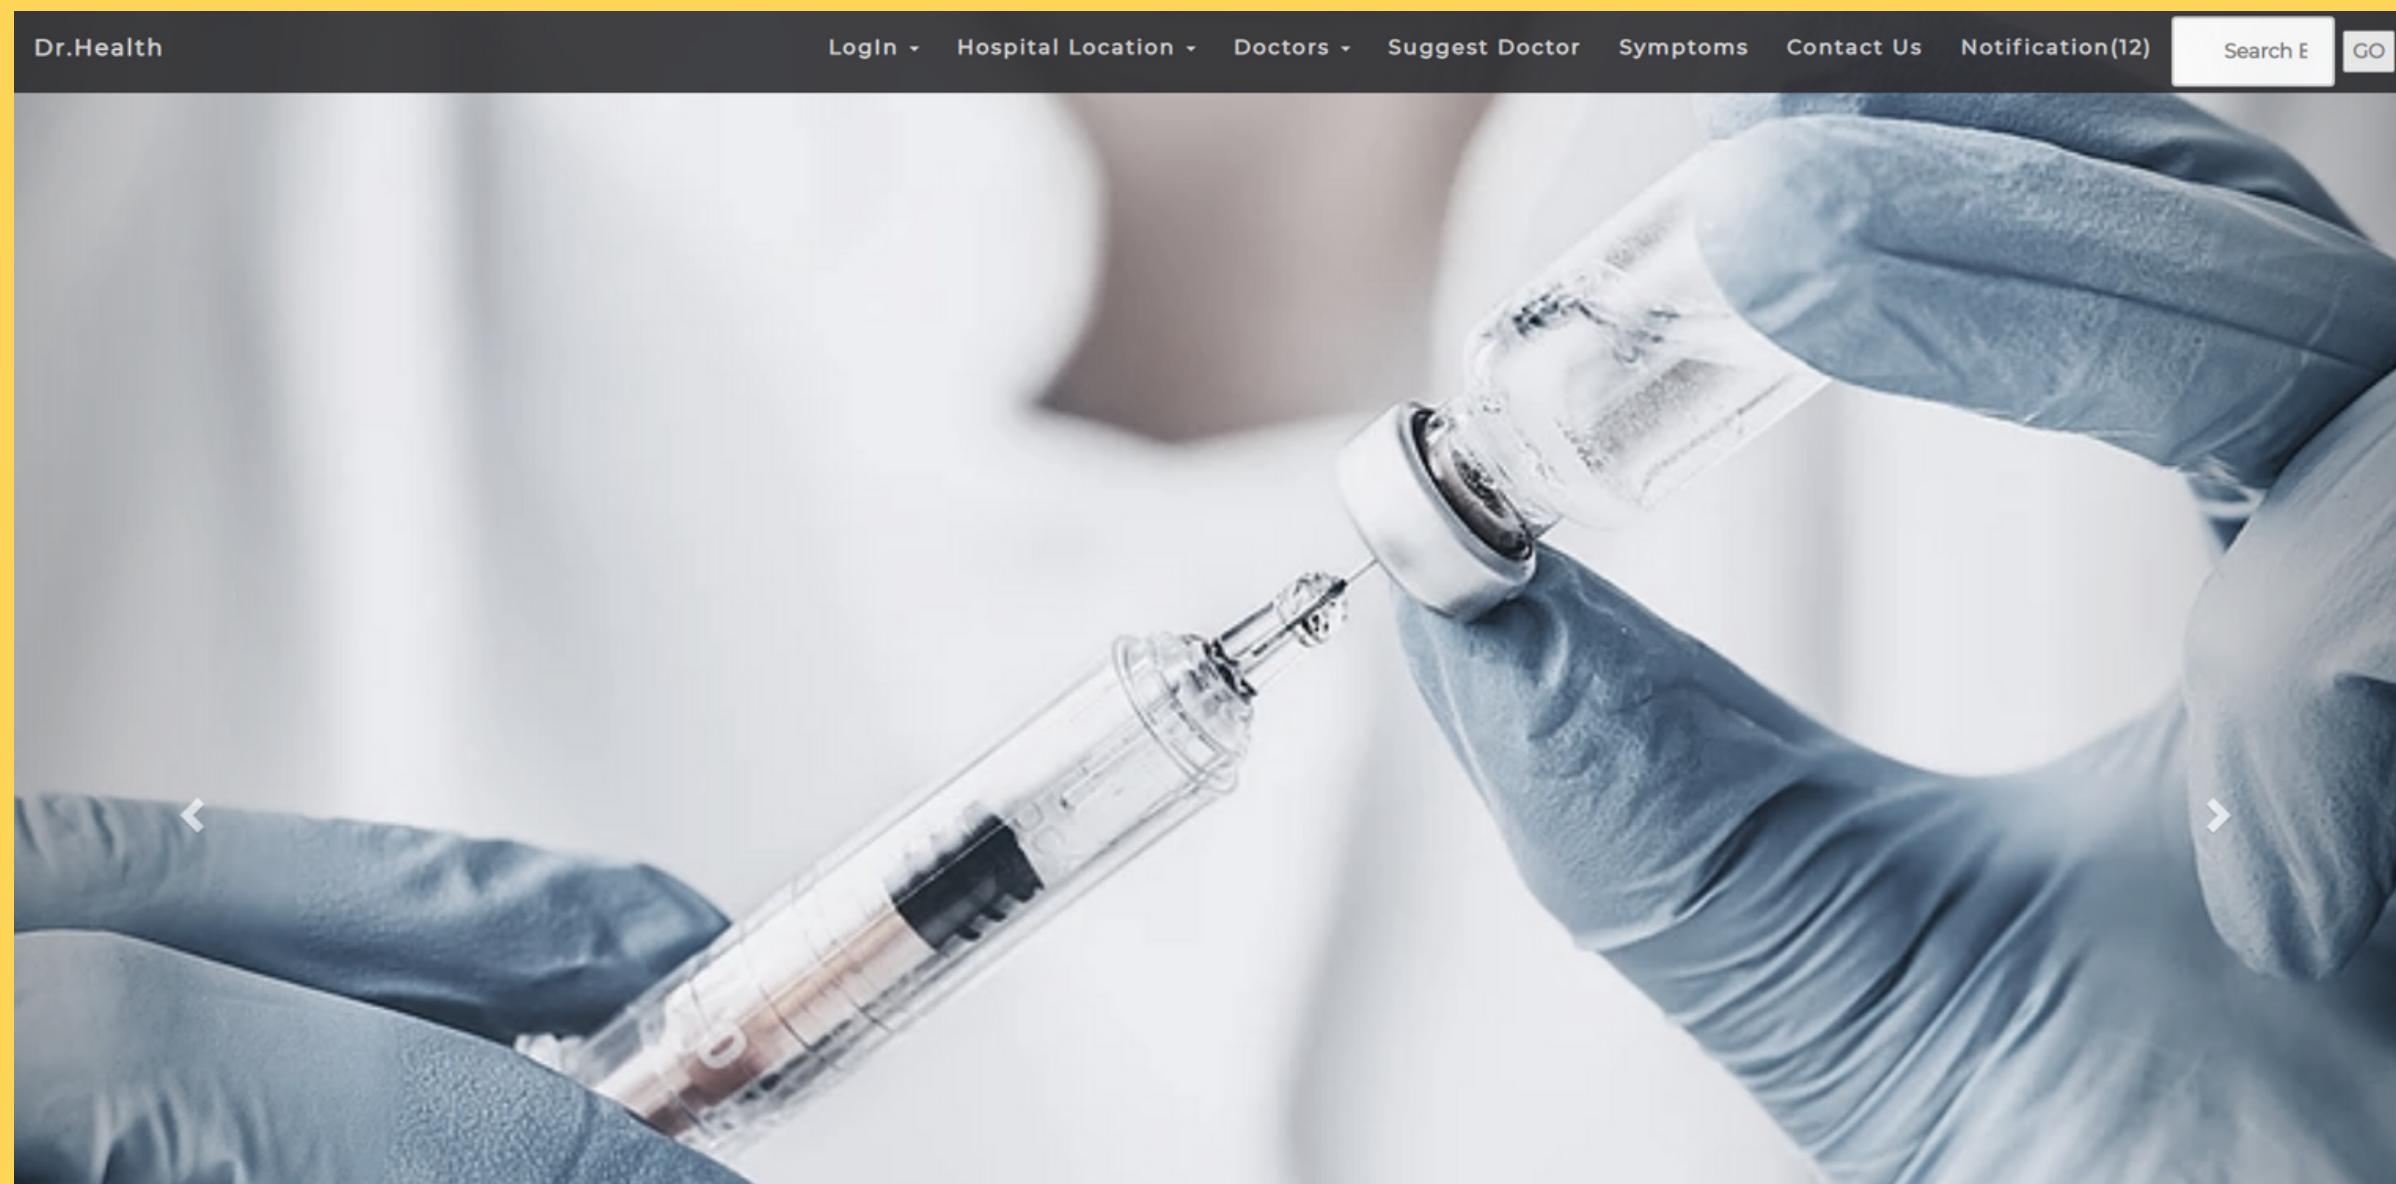

The screenshot shows the phpMyAdmin interface for the 'online_health_care' database. The left sidebar lists databases: information_schema, mysql, New, online_health_care, performance_schema, phpmyadmin, and test. The 'online_health_care' database is selected, showing its tables: admin, appointment, comment, consulting_schedule, doctor, doc_message, message, schedule, tbl_comment, and user. A table structure is displayed with columns: Table, Action, Rows, Type, Collation, Size, and Overhead. The 'Create table' section is also visible.
